WEEKLY MORBIDITY REPORT  
EXPLANATORY COMMENT

This report presents each week the annual admission rates per 1000 average strength for certain communicable diseases, venereal diseases, and all causes combined (diseases, injuries and poisonings). Source material is the weekly communicable disease reports submitted to BuMed by all shore stations within the continental limits of the United States.

Admission rates are calculated on an annual basis to facilitate comparison with corresponding annual, quarterly or monthly figures. Such annual rates of admission indicate the number of admissions per 1000 average strength which would occur over a year's time if the current week's experience continued for a year. They are obtained as follows:

$$\frac{\text{Number of Admissions During the Week} \times 52}{\text{Average Strength for the Week}} \times 1000$$

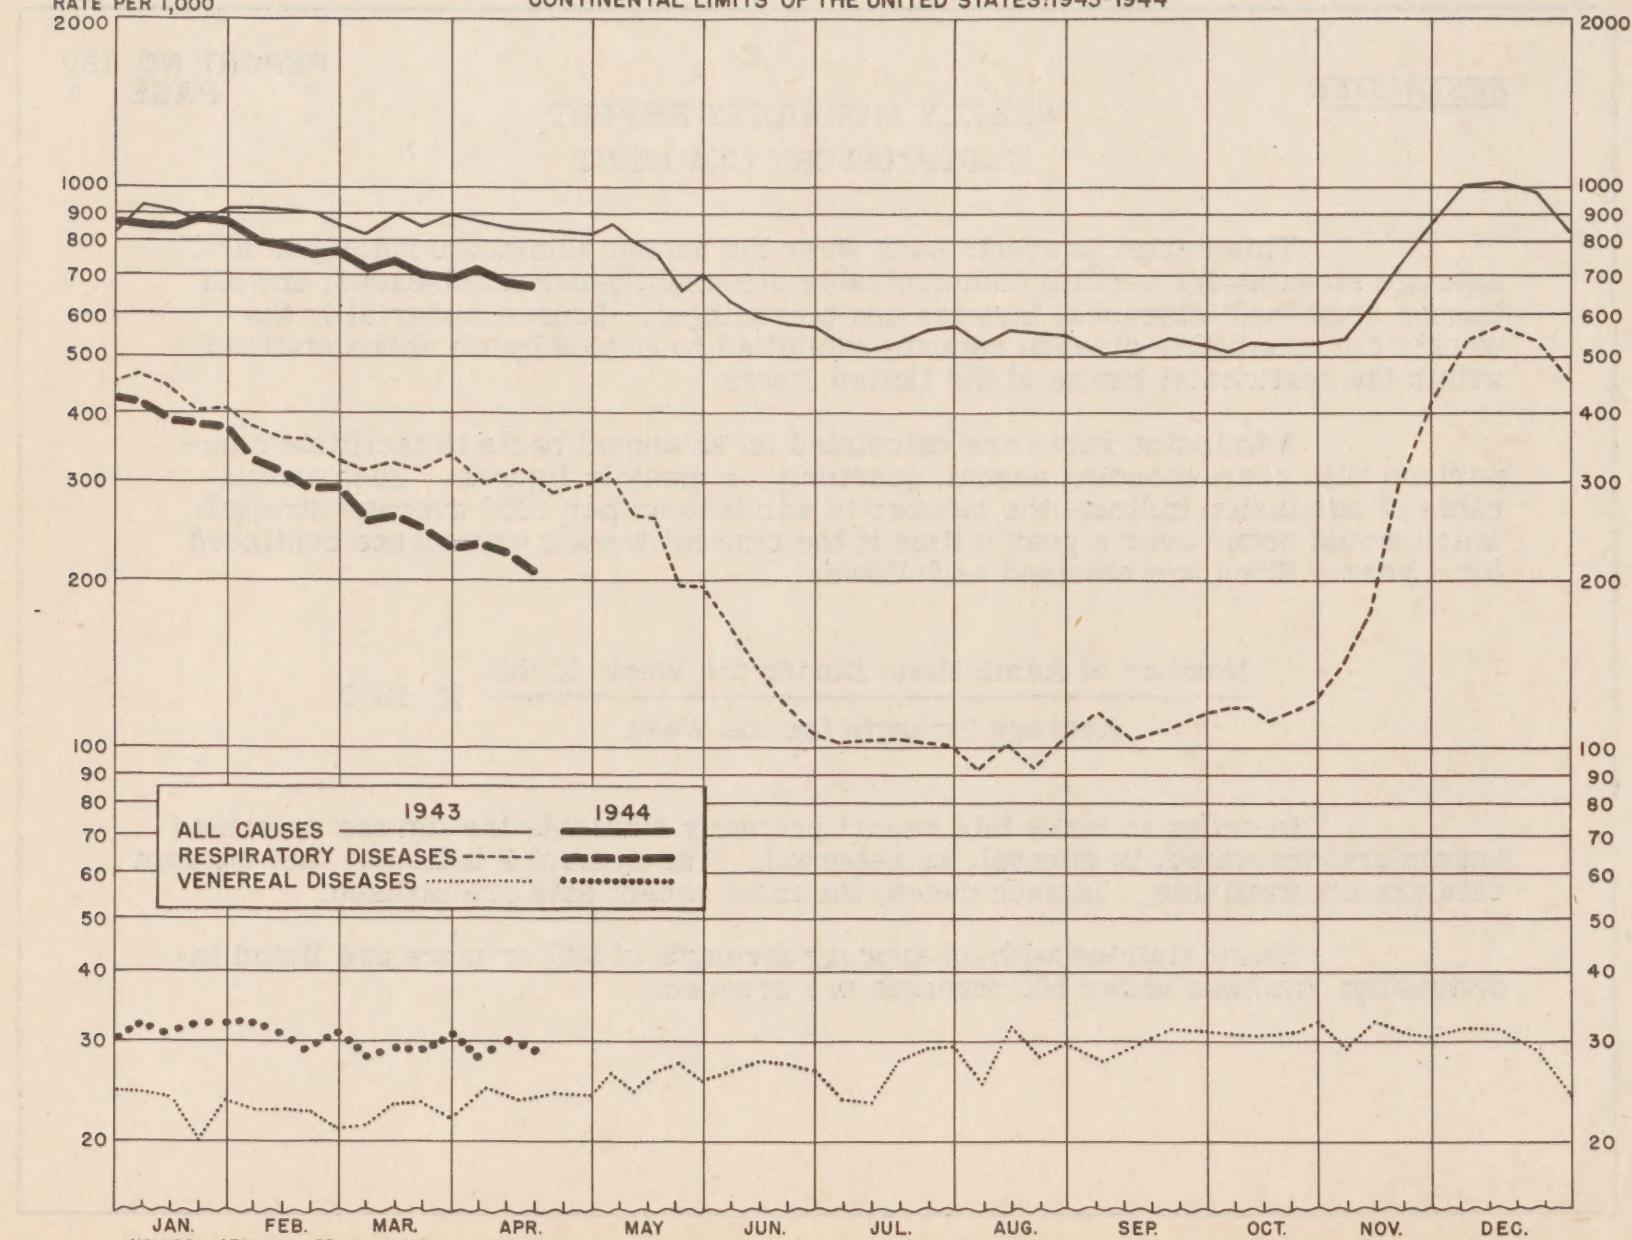

In order to make this report promptly available the figures contained herein are presented, in general, as reported. The symbol # indicates that current data are not available. In such cases, the most recent data are utilized.

Shore stations with an average strength of 500 or more are listed individually; stations under 500 strength are grouped.

### CURRENT TRENDS

Week Ending 15 Apr 1944

The downward trend in the curve for Admissions All Causes which began in the week ending Jan. 22 continued this week, the 1944 curve remaining well below the 1943 curve for the corresponding period. The highest rate (1035) was reported for the Potomac and Severn River Commands, the lowest (430) for the 8th District.

The respiratory disease rate dropped sharply to a point considerably below the rate recorded for the comparable (16th) week of 1943. The curve for these infections turned upward only in the Potomac and Severn River Commands and in the 7th and 13th Districts. The highest rate (297) was reported from the 13th District, the lowest (98) from the 7th District.

After a slight rise to 30 last week the venereal disease rate dropped slightly this week. The curve for 1944 to date continues to stand above the 1943 curve for the corresponding period. The highest rate (44) was recorded for the 4th District, the lowest (17) for the 9th District.

Influenza and Catarrhal Fever. The rate for these infections dropped rather sharply this week bringing the curve to the lowest point recorded since the first week in November 1943. The curve since the 4th week of the year has stood below the 1942 and 1943 curves for the corresponding period. The highest rate for these infections (225) was reported from the 3rd District, the lowest (64) from the 7th District.

Pneumonia--Broncho and Lobar. After a slight drop last week the rate for these infections returned this week to 5. Particularly unfavorable is the rate of 19 reported for the 13th District; within that District the Naval Training Station at Farragut, Idaho, reported a rate of 33. No other District reported a rate over 7 and the 4th Naval District reported no cases.

Pneumonia, Atypical. For the sixth consecutive week the rate for atypical pneumonia was reported as 3. The curve for this infection for the past 5 weeks has stood only slightly above the 1943 curve for the corresponding weeks. The 11th District again reported the highest rate (11) and the 13th District the next highest (5). Within the 11th District the U. S. Marine Corps Base at San Diego, Calif., reported a rate of 54. The 1st and 4th Districts reported no cases.

Tonsillitis and Pharyngitis, Acute. The trend for these infections, which has been downward since the week ending Feb. 26, continued downward this week. The highest rate (160) was

REPORT NO. 120  
PAGE 4

CURRENT TRENDS--CONTD.

reported for the Potomac and Severn River Commands, the lowest (28) for the 6th District.

Rheumatic Fever, Acute. The rate of 2 reported for this week is the lowest rate for this infection reported since the 1st week in Dec. 1943. The 13th District and the Potomac and Severn River Commands each reported a rate of 4, the highest rate reported by any District. The 7th District reported no cases.

Scarlet Fever. The scarlet fever rate continued for the third consecutive week at 9, a point intermediate between the 1942 and the 1943 rate for the corresponding week. The curve rose sharply in the 3rd District but only slightly in the 1st, 4th, 5th, 7th, and 13th Districts. The highest rate (44) was reported for the 13th District, the lowest (0.71) for the 6th District. In the 13th District the Naval Training Station, Farragut, Idaho, reported a rate of 74.

Cerebrospinal Fever, Meningococcic. The rate for this infection dropped this week to 0.42, a point well below that recorded for the corresponding week of 1943. Only four Districts reported cases and in only one, the 3rd District, was the rate reported as high as 1.

Malaria. After a drop to 2 the preceding week the rate for malaria returned this week to 3. The curve stands at a point above that recorded for the corresponding week of 1943 and considerably above that recorded for the corresponding week of 1942. The 11th District reported the highest rate (9) and the 12th District the next highest rate (7). The 7th District reported no cases.

Measles. The measles rate dropped slightly continuing the downward trend beginning in the first week of February. The curve now stands at a point slightly under that recorded for the corresponding week of 1942 and 1943. The highest rate (21) was reported from the 13th District, the lowest (2) from the 7th District. The Naval Training Station at Farragut, Idaho, reported a rate of 39.
